The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1,6,8,13,24 and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over either Boyer or O'Dell in view of Driskell et al. Boyer and O'Dell show the claimed strap with the exception of their elongation members being heat shrunken. Driskell teaches the method of forming gathers in a member by the process of heat-shrinking both an elongation member and the attached member wherein the elongation member is of a material that shrinks greater than the member. It would have been obvious to one of ordinary skill in the art at the time the invention was made to shrink the elongation members of either Boyer or O'Dell by the application of heat, as taught by Driskell, to form gathers in their outer sheaths.

Claims 2 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over either Boyer or O'Dell and Driskell, as applied to claims 1 and 8 above, and further in view of Piper, Chang et al or Silverberg. Piper, Chang and Silverberg teach the use of binder yarns as a connecting means. It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide binder

yarns to either Boyer or O'Dell, as taught by Piper, Chang or Silverberg, as a connecting means for their elongation members to their outer sheaths.

Applicant's arguments filed 2/13/07 have been fully considered but they are not persuasive. Applicant argues that because the elongated member of Driskell after being heat-shrunk would be elastic the combination in view of the teaching of Driskell would result in O'Dell having an elastic elongation member. The examiner disagrees as the POY yarn of O'Dell used for fall arrest when heat-shrunk would not be elastic but just as inelastic as applicant's POY yarn that is used for fall arrest.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will

be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
